Education

École Polytechnique Fédérale de Lausanne (EPFL)

Sep 2025 – Present

M.Sc. in Computer Science

Lausanne, Switzerland

- **GPA: 5.53/6** — Specialization in Artificial Intelligence and Data Science.
- **Teaching Assistant:** Applied Data Analysis (CS-401) and Information, Computation & Communication (CS-119).

University of Prishtina “Hasan Prishtina”

Oct 2022 – July 2025

Bachelor of Computer and Software Engineering

Prishtina, Kosovo

- **GPA: 10/10 (4.0)** — Dean's List — Representing my Faculty (FIEK).

Professional Experience

Center for Digital Trust (C4DT), EPFL

Aug 2026

Software Engineer Intern

Lausanne, Switzerland

- Re-architected **D-Voting**, a distributed, privacy-preserving e-voting platform in **Go** and **TypeScript**, unifying two codebases into a single **monorepo**.
- Audited **~600 files** to remove obsolete code and fix bugs, while improving **Docker** and deployment tooling.
- Migrated node-to-node communication from **gRPC** to **WebSockets**, testing the new transport for production.

Raiffeisen Tech

Mar 2025 – July 2025

Data Engineer Intern

Prishtinë, Kosovo

- Built data pipelines using **Python**, **SQL**, **Pandas** and **Databricks**, including web scraping, data cleaning and CDC.
- Designed **CI/CD** workflows with **GitHub Actions**, including automated workflow cleanup of **90+ stale branches**.
- Worked in an **Agile/Scrum** environment using **Git** and **Jira** for sprint planning, PR reviews, ticketing and traceability.

EPFL Spacecraft Team

Feb 2026 – Present

Systems Engineer

Lausanne, Switzerland

- Built an end-to-end simulator for the CubeSat satellite, integrating **5 systems** from ground control to flight software.
- Designed command and telemetry data flows using TCP, MQTT, HTTP and WebSockets.
- Built a **Control Center** and automated mission tests for communication windows, bandwidth limits and packet loss.

Projects

DocAI - Legal AI Platform

Agentic RAG | FastAPI | SQL | LLMs

- Built a legal assistant using an **Agentic RAG** system over scanned legal documents.
- Built an LLM-assisted OCR and document processing pipeline to clean, structure, and contextually enrich **7,000+ scanned legal documents**, then encoded them into **Qdrant** for vector retrieval.
- Developed a full-stack scalable web application with **FastAPI** and PostgreSQL, including persistent chat sessions.

Robust Journey Planner

Apache Spark | Hadoop/HDFS | Python | XGBoost

- Trained 7 XGBoost quantile regression models on **65M+ SBB records** using distributed **Spark ML** pipelines.
- Implemented state-of-the-art **Profile CSA** routing across **14M Swiss connections** with confidence-aware pruning.
- Optimized routing latency by **52×** (**3 s** → **58 ms**) using precomputed data and compact in-memory scans.

EPFL Research Projects

Distributed ML | Computer Vision

- **SaCS Lab:** Studying adversarial robustness of fragmented decentralized learning under targeted attacks.
- **ISREC Lab:** Researched **Vision Transformer** decoders for cell segmentation in histopathology images.

Technical Skills

Languages: Python (**5+ years**), C, Java, C++, Go, JavaScript/TypeScript, React, SQL, PHP.

Frameworks & Libraries: PyTorch, Spark, Pandas, Scikit-Learn, FastAPI, React, Spring Boot.

Tools & Platforms: Docker, PostgreSQL, Qdrant, Hadoop/HDFS, Databricks, GitHub Actions, Git, Linux, Jira, Bash.

Concepts: Distributed Systems, Agentic RAG, LLMs, Machine Learning, Data Engineering, ML Pipelines, ETL/ELT, REST APIs, Vector Search, CI/CD, JWT, NoSQL, Redis.

Professional Skills: Communication, Problem Solving, Teamwork, Cross-functional Collaboration, Mentoring.
